

DOZ OS
DIGIT ONE ZERO

v4.1 — Growth Operating System

The Comprehensive Operating Guide

How to run Digit One Zero Ltd using DOZ OS — from daily execution to the ₦500M vision. Every module, every workflow, every AI interaction explained.

COMPANY	FOUNDER	VERSION
Digit One Zero Ltd	Kelvin Keshy	4.1 — Live KPIs

1

What Is DOZ OS?

The purpose, philosophy, and architecture of the system.

DOZ OS (Digit One Zero Operating System) is the backend of your company. It is not just software — it is the operating system that helps Digit One Zero grow from a founder-dependent business into a scalable, process-driven organization targeting **¥500M+ annual revenue** by 2028.

Every module, dashboard, AI interaction, and report exists to answer one question: **"What is the next highest-impact action that moves the company closer to the vision?"**

The Fundamental Principle

DOZ OS never simply reports what happened. It actively helps the founder and team make better decisions. Every metric has a **current value, target, forecast, and required weekly pace**. The system always answers: **"Are we ahead or behind?"**

The system serves four types of users: the **Founder** (Kelvin), who sees the company-wide growth dashboard; **Staff** (operations, finance), who manage projects and approvals; **Interns**, who receive daily tasks and file reports; and **Freelancers**, who see crew assignments and deliverables. Each role sees a personalized dashboard — everyone knows what they should be doing.

Clients access a separate **Client Portal** (no login required) where they view project progress, approve deliverables, and confirm payments. Vendors do not have accounts — the Production Manager adds vendor information directly.

2

Getting Started

Signing in, navigating, and understanding what you see.

- 1 **Open the app.** Navigate to the DOZ URL. You will see the sign-in screen.
- 2 **Sign in.** Use your email and password. The demo password for all accounts is **doz2025**. You can also click a quick persona button (Founder, Ops Lead, Finance, Intern, Freelancer).
- 3 **Navigate.** Use the left sidebar to switch between modules. Press **⌘K** (or Ctrl+K) to open the command palette and jump to any module.
- 4 **Sign out.** Click your avatar in the bottom-left of the sidebar, then click "Sign out."

DEMO ACCOUNTS

Founder: founder@digitonezero.com · **Ops:** ops@digitonezero.com · **Finance:** finance@digitonezero.com · **Intern:** chioma@digitonezero.com · **Freelancer:** bola@freelance.ng — all use password **doz2025**

Role-Based Access

Founder sees all 12 modules including AI Chief of Staff. **Staff** sees everything except AI. **Interns** see Command Center, Field Mode, Team, and SOP. **Freelancers** see Command Center, Field Mode, Projects, and Team. This ensures everyone focuses on what's relevant to their role.

3 The Growth Dashboard

The most important screen — measures progress toward ₦500M.

The Growth Dashboard is the cockpit of the company. It shows a single **Company Health Score** (0–100) broken down into Sales, Marketing, Finance, Operations, People, and Delivery. Below the score, **39 growth KPIs** are tracked across 9 categories — each with a live current value, target, forecast, confidence score, and required weekly pace.

Every KPI **self-updates from real database data**. When an invoice is paid, revenue updates. When an intern logs a social post, the content counter goes up. When you log your time, the Founder Freedom Score recalculates. No manual updates needed.

ANNUAL REVENUE

₦31.5M

Target: ₦120M · 26%

HEALTH SCORE

37/100

Behind — needs acceleration

PIPELINE COVERAGE

94.8%

Target: 300% · needs 3x pipeline

FOUNDER FREEDOM

39/100

Target: 50 · progressing

The dashboard's nine sections are: **Revenue** (revenue, pipeline, cash, outstanding, deal size, margin), **Business Development** (leads, win rate, referral %, marketing %), **Marketing** (content, campaigns, ROI), **Client Success** (repeat rate, NPS, ratings), **Operations** (on-time, budget variance, vendor performance), **Founder** (time allocation, delegation, focus), **People** (interns, staff, training), and **EventCo** (platform progress, beta users).

HOW TO USE IT

Open the Growth Dashboard every Monday. Look at the Health Score first. If any category is below 50, that's where to focus this week. Then scan the key metrics — anything red needs immediate action.

4

The CEO Command Center

Your first screen every morning — personalized per role.

The Command Center is what you see after signing in. It is **role-aware**: the founder sees the company-wide view, interns see their own tasks and reports, staff see their projects and approvals, freelancers see their crew assignments.

For the founder, the Command Center displays: the **AI Morning Briefing** (auto-generated, no clicks needed), **AI Coaching Nudges** (proactive advice), the **Founder Freedom Score** (measuring your independence), **Growth Targets** (15 key metrics with current vs target), today's **Top Priorities** (interactive checkboxes), **Pending Approvals**, the **Weekly CEO Review** (auto-generated on Mondays), pipeline, cash position, and team activity.

"Good morning Kelvin. We are currently 46% behind our revenue target with ₦31.5M generated against ₦120M target. 1 invoice is overdue: INV-2025-061 for ₦4,500,000. Today's highest-impact actions: 1. Call Shell regarding proposal. 2. Approve RFQ for MTN event. Estimated business impact: ₦15M potential pipeline."

— AI Morning Briefing (auto-generated)

For interns, the Command Center shows: "Good morning, Chioma" with their tasks for today, a prominent "File Your Daily Report" prompt (amber if not filed, green if filed), their weekly objective, their learning plan, and their recent reports. It feels focused and encouraging — not overwhelming.

For staff, it shows their projects, pending approvals they can action (segregation-enforced — they cannot approve their own requests), their team's daily reports, and weekly objectives.

5

The AI Chief of Staff

Your digital COO — proactive, contextual, always coaching.

The AI is not a chatbot you have to remember to use. It is a **presence** on your dashboard that proactively briefs you, flags risks, and coaches you toward the growth vision. It uses the z-ai language model with live business data as context.

CEO Morning Briefing

Auto-generated every morning (cached for 1 hour). Addresses you by name. Includes: revenue vs target, overdue invoices, proposals needing follow-up, referral dependency status, intern completion rate, pending approvals, and your **top 5 highest-impact actions** with estimated business impact in ₺. No clicks needed — it just appears.

Weekly CEO Review

Auto-generated every Monday. Answers: What happened last week? What improved? What declined? Biggest risks? Cash leaks? Which clients need attention? Which proposals need follow-up? Which team members need help? Which goals are off track? Then recommends your **Top 5 CEO priorities** for the week.

Monthly Board Report

Auto-generated monthly with 14 sections: Revenue, Profit, Cash Flow, Pipeline, Sales, Marketing, Operations, People, Project Margins, Client Satisfaction, Vendor Performance, Growth Score, Founder Time Allocation, and Recommendations.

AI Coaching Nudges

Continuous, proactive coaching that acts like an experienced COO. Examples: "Kelvin, you've spent 9 hours this week on administration. Target is below 4 hours. Recommend delegating invoice verification." Or: "Referral dependence remains at 50%. Target is below 40%. Publish two LinkedIn case studies this week."

You can also interact with the AI directly in the **AI Chief of Staff module**: generate a daily plan, run a risk check, draft a proposal, or ask a question. The AI uses live business context (pipeline, cash, tasks, team activity) to give specific, actionable responses.

6

All 12 Modules Explained

What each module does and when to use it.

MODULE	WHAT IT DOES
Growth Dashboard	The cockpit. 39 live KPIs, health score, 9 sections. Open every Monday.
Command Center	Your daily starting point. AI briefing, priorities, approvals, focus score. Personalized per role.
Strategic Planning	Goal cascade: Annual → Quarterly → Monthly → Weekly → Daily. Tasks link to goals. Distraction detector.
Routines	Business rhythm checklists: Morning Briefing, End of Day, Weekly Review, Event Day, Monthly Close, Sales Pipeline.
AI Chief of Staff	Interactive AI: daily plans, risk checks, proposal drafts, chat. The proactive growth coach.
Field Mode	Mobile-first for on-site use. Quick daily report filing + offline event run-sheet with localStorage sync.
CRM & Sales	Pipeline kanban (5 stages), accounts, proposals, follow-ups, referrals. Generate client portal links.
Marketing & Growth	Lead source breakdown, referral nurturing, content calendar, campaign ROI. Reduces referral dependency.
Projects & Events	Project cards with financial strip (earned/received/balance/cost), crew, milestones. Create new projects with budget.
Procurement	3-way segregation (Requester ≠ Approver ≠ Payer), RFQs, quote comparison, POs, payment requests. Add vendors directly.
Financial Intelligence	P&L by project/client/service, cash flow, invoices, expenses with receipt upload, budget tracking, invoice reminders.
Team Management	Members, daily/weekly reports, weekly intern task assignment, hiring plan (6-stage bottleneck-based).
SOP & Knowledge	Templates, policies, training materials, case studies. The company's process library.

7

The Founder Freedom Score

The metric that measures whether you're building a company that can run without you.

The Founder Freedom Score is your competitive advantage. It measures whether Digit One Zero can continue to grow even when you are not involved in every decision. The goal is to **increase this score every quarter**.

CURRENT SCORE

39/100

Rating: Progressing

YEAR 1 TARGET

50/100

Year 3: 80/100

The score is calculated from five sub-metrics:

- **Projects without founder** (25 pts) — % of projects delivered without your direct involvement as manager
- **Delegated decisions** (20 pts) — % of approvals not made by you
- **Strategy vs operations time** (20 pts) — ratio of strategy hours to operations hours
- **SOP-driven tasks** (15 pts) — % of tasks completed without escalation to you
- **Revenue without founder sales** (20 pts) — % of revenue from non-founder-sourced leads

The card also shows your **time allocation** for the week: how many hours you spent on Sales, Operations, Administration, Strategy, and Delivery. Use the "Log Time" button to record your time — the score updates automatically.

WHY THIS MATTERS

The real objective isn't just to grow revenue — it's to build a company that can continue to grow even when you're not involved in every decision. That is the clearest indicator that Digit One Zero has evolved from a founder-led business into a scalable company.

8

The Hiring Plan

Hire based on bottlenecks, not headcount.

The system recommends hiring only when: revenue supports it, team utilization exceeds 80%, or growth targets require additional capacity. The 6-stage plan is sequenced to solve the company's biggest bottleneck at each stage of growth.

STAGE	ROLE	REASON	SUCCESS METRIC
1	Business Development Executive	Generate predictable revenue	20 qualified leads/month
2	Finance & Operations Officer	Separate financial control from operations	100% procurement compliance
3	Project Coordinator	Reduce founder involvement in delivery	Founder ops involvement below 30%
4	Marketing & Content Executive	Reduce referral dependence	35% of leads from marketing
5	Senior Producer	Manage simultaneous large productions	5 concurrent projects without founder
6	Technology/Product Manager	Lead EventCo/Fiestivo	SaaS growth independent of production

The Hiring Dashboard (in the Team module → "Hiring Plan" tab) shows the current team, open positions, salary budget (¥1.75M/month across all planned hires), team utilization, and whether each stage is ready to activate.

How the system prevents financial leakage.

The procurement workflow enforces **3-way segregation of duties**: no single person can request, approve, and pay the same transaction. This is enforced both in the database schema and in the API (returns HTTP 403 on violation).

- 1 **RFQ created** — staff or PM creates a Request for Quote for a needed item or service
- 2 **Quotes collected** — minimum 2-3 vendor quotes (by threshold: under ₦100K = 1 quote, ₦100K-₦1M = 2, above ₦1M = 3)
- 3 **Quote comparison** — system highlights the lowest and recommended quote with budget variance
- 4 **Purchase Order issued** — formal PO created for the selected vendor
- 5 **Payment Request** — requester creates a payment request linked to the PO
- 6 **Approval** — approver (≠ requester) approves or rejects
- 7 **Payment** — payer (≠ approver, ≠ requester) executes payment and marks as paid
- 8 **Verification** — receipt uploaded, expense verified

The **Financial Intelligence module** shows profit by project, client, and service line. It tracks invoices (with overdue detection and AI-drafted WhatsApp/Email reminders), expenses (with receipt upload), budgets (with utilization bars), and cash flow. A "Reminders" tab shows overdue invoices with copy-ready reminder messages and pending payment confirmations from the client portal.

How clients self-serve without logging in.

Clients access their portal via a shareable link containing a token (e.g., `/?portal=lcc-portal-2025`). No DOZ OS account needed. The portal shows only client-facing data — no internal costs, profit margins, or team information.

The portal has three tabs:

- **Projects** — view project status, event date, venue, progress, and deliverables. Clients can approve or request changes on each deliverable (with a note).
- **Invoices** — view invoice code, amount, amount paid, balance, and status. If there's an outstanding balance, clients click "Confirm Payment" to submit a payment confirmation (amount, method, reference) which goes to the founder for verification.

- **Payment Confirmations** — track the status of submitted confirmations (PENDING → VERIFIED or REJECTED).

To share a portal link: go to **CRM & Sales** → **Accounts tab** and click "Copy Link" next to any account with an active portal. Five portal tokens are currently active: GTBank, MTN, Lagos Chamber, Dangote, and Shell.

11 Field Mode for On-Site Work

Mobile-first tools for interns and freelancers at events.

Field Mode is designed for phone-in-hand use at events. It has two features:

Quick Daily Report Filing

File an end-of-day report in under 30 seconds: what you did (one per line), what's planned tomorrow, blockers, hours worked (slider), and mood (emoji: Great/OK/Stressed). Submitting twice today updates the same report — no duplicates.

Offline Event Run-Sheet

A per-project checklist that works without internet. Combines DB milestones with an 11-item event-day template. Milestone toggles queue when offline and auto-sync when back online. Shows progress ("7 of 12 complete") with online/offline indicator.

12 Routines & Business Rhythm

Run the same playbook every time.

The Routines module contains 6 pre-built business routine templates that systematize your operational discipline. Each is an interactive checklist you run through and track completion.

ROUTINE	FREQUENCY	PURPOSE
Morning Briefing	Daily	Start every day with focus — review priorities, approvals, overdue items, set DND
End of Day Wrap	Daily	Close out — update tasks, log expenses, confirm reports, note tomorrow's priority
Weekly Business Review	Weekly (Mon)	Cash flow, pipeline, profitability, team performance, weekly objectives
Event Day Run-Sheet	Event Day	11-step execution checklist from crew call to post-event debrief
Monthly Close	Monthly	Reconcile, P&L, vendor review, goal update, next month's priorities
Sales Pipeline Review	Twice weekly	Follow-ups, proposals near expiry, new leads, referral nurturing

13

Live KPIs — How Targets Self-Update

Every metric is computed from real database data.

Every growth KPI now **self-updates from real database data**. The system includes a KPI Computation Engine (35+ functions) that queries the actual database every time the dashboard loads. No manual updates needed.

KPI	DATA SOURCE	COMPUTED VALUE
Annual Revenue	Sum of invoice.amountPaid	¥31.5M
Referral Dependency	Opportunities where source = REFERRAL / total	50%
Social Posts This Month	ContentLog count this month	6 / 12
Pipeline Coverage	Open pipeline value / revenue target	94.8%
Founder Freedom Score	Projects without founder + delegated decisions + SOP tasks	39/100
Cash Position	Invoices received – expenses paid	¥9.52M

When an intern logs a social post, the content counter goes up. When an invoice gets paid, revenue updates. When you log your time, the Founder Freedom Score recalculates. The system always reflects reality.

How to use DOZ OS as your operating rhythm.

Every Morning (5 minutes)

1. Open the Command Center. Read the AI Morning Briefing.
2. Check the Founder Freedom Score — is your admin time high?
3. Review Growth Targets — anything red needs attention.
4. Check off your Top Priorities as you complete them.
5. Approve pending payment requests (segregation enforced).

Every Monday (30 minutes)

1. Read the Weekly CEO Review (auto-generated).
2. Open the Growth Dashboard — check the Health Score.
3. Assign weekly tasks to interns (Team → Weekly Tasks).
4. Run the Weekly Business Review routine.
5. Check overdue invoice reminders — send WhatsApp/Email drafts.

Every Friday (15 minutes)

1. Open Marketing & Growth → Referral Sources.
2. Contact every overdue referrer ("Log Contact").
3. Review content calendar — schedule next week's posts.
4. Run the End of Day Wrap routine.

Monthly (Last Friday)

1. Read the Monthly Board Report (auto-generated).
2. Run the Monthly Close routine.
3. Review project P&L — identify profit and loss projects.
4. Rate vendors and cull underperformers.
5. Update annual goal progress.

Where Digit One Zero is going — and how DOZ OS gets you there.

The North Star is clear: **¥500M+ annual revenue, 25%+ net profit margin, 40+ corporate clients, and a commercially launched EventCo/Fiestivo platform by 2028.** Year One target: ¥120M revenue, 15 corporate clients, founder operational time below 50%.

"The real objective isn't just to grow revenue — it's to build a company that can continue to grow even when you are not involved in every decision. That is the clearest indicator that Digit One Zero has successfully evolved from a founder-led business into a scalable company."

DOZ OS measures progress toward this vision every day. Every KPI has a current value, a target, a forecast, and a required weekly pace. The AI coaches you toward it. The Founder Freedom Score ensures you're building independence, not just revenue. The hiring plan sequences your team growth to solve bottlenecks. And the routines systematize the discipline that turns ambition into execution.

The system is honest. Right now, the Health Score is 37/100. Revenue is at 26% of target. Referral dependency is 50% (target: 40%). But now you can **see** exactly where you stand and **what to do about it** — every morning, automatically.

THE QUESTION DOZ OS ALWAYS ANSWERS

"What is the next highest-impact action that moves Digit One Zero closer to becoming a ¥500M+ event production and technology company?"
